ClearCut

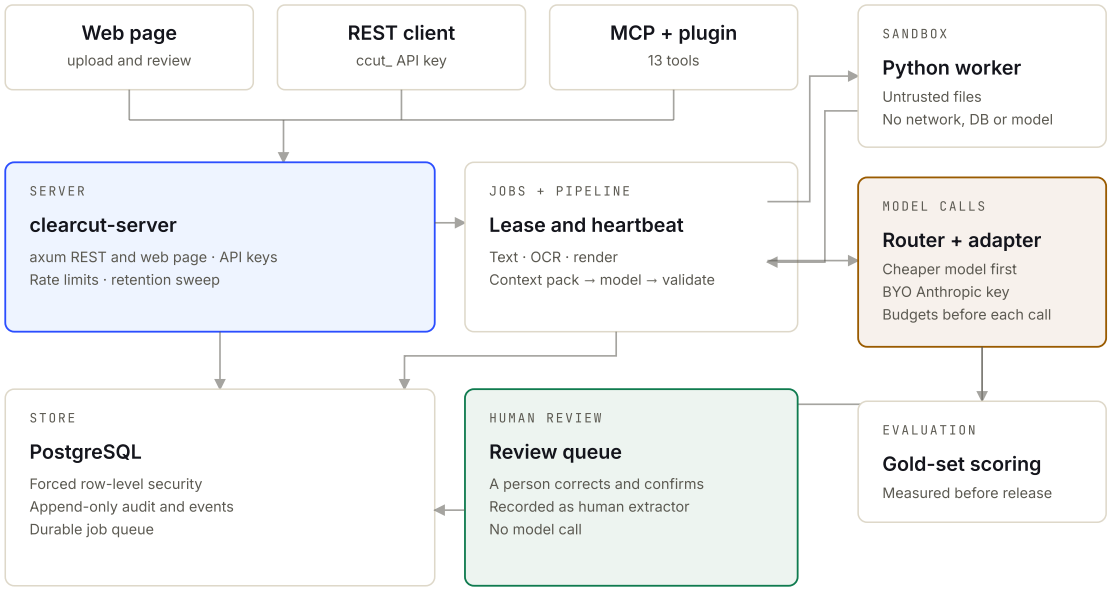

LIVE ALPHA, INVITE ONLY

AGENT-NATIVE INVOICING

Upload a South African invoice, read it page by page, check every figure against the page it came from, then export. One Rust core, three ways in.

STATUS	DEMO	SURFACES
Live alpha, invite-only accounts	Public, no key, prepared fixtures	REST API, MCP server, Claude plugin
MCP TOOLS	**TESTS**	**LICENCE**
13	641 core, 1,013 Python worker	Apache-2.0

ARCHITECTURE

Clients enter through REST, MCP or the web page. Untrusted documents stay in a sandboxed worker, the pipeline reads and validates them, and the review queue keeps a person in the loop.

TRUST BOUNDARY HUMAN REVIEW MODEL CALLS

DECISIONS THAT SHAPED IT

ADR-0002 ACCEPTED

Money as integer minor units

Amounts are i64 cents, quantities are thousandths and rates are basis points, with half-away-from-zero rounding and VAT per tax category on the subtotal.

Why. Floats cannot represent cents exactly, and JSON numbers above 2^53 lose precision. Integer money makes the arithmetic auditable.

ADR-0007 ACCEPTED

Authentication and tenant isolation

256-bit ccut_ keys stored only as SHA-256, scopes, forced row-level security, and an application role that refuses to start as the owner.

Why. Tenant isolation should be enforced by the database even when application code is wrong. The role boundary makes a missed filter fail closed.

ADR-0018 ACCEPTED AND IMPLEMENTED

Model router and escalation ladder

A cheaper model reads first and escalates only when needed. Every page ends as read or needs review, and budgets are checked before each call.

Why. Most invoices are routine. Reading every page with the largest model would spend money without improving the answer.

WHAT IS REAL, AND WHAT IS NOT

AREA	STATUS	NOTE
Live service	Alpha	Invite-only accounts. The demo is public and uses prepared fixtures.
Demo calls	None	The public demo calls no model and saves nothing.
Human review	Required	Unsettled pages cannot finish without a person.
MCP safety	Soft guard	Review and delete tools require confirmation. It is documented as a soft guard, not a hard boundary.
Licence	Apache-2.0	Source is public under Apache-2.0.
Tax advice	None	ClearCut checks figures. It does not give tax advice.
